

Handling the ϵ moves

Lemma

For any NFA A with ϵ transitions, there is another NFA, say B , such that B has no ϵ transitions and $L(A) = L(B)$.

Proof Idea

Let $S \subseteq Q$.

Let

$$E(S) = \left\{ q \mid \begin{array}{l} q \text{ is reachable from some state in } S \\ \text{with zero or more } \epsilon \text{ transitions} \end{array} \right\}$$

Example

Handling the ϵ moves

Lemma

For any NFA A with ϵ transitions, there is another NFA, say B , such that B has no ϵ transitions and $L(A) = L(B)$.

Proof.

Let $A = (Q, \Sigma, \delta, q_0, F)$ be an NFA with ϵ transitions. We construct NFA, say B as follows:

Construction

$$Q' = Q,$$

Σ' same as Σ , but no ϵ used anywhere,

$$\delta'(q, a) = E(\delta(q, a)),$$

$$q'_0 = q_0,$$

$$F' = F.$$

What if ϵ transitions from the start/to the final state in A ?

Handling the ϵ moves

Lemma

For any NFA A with ϵ transitions, there is another NFA, say B , such that B has no ϵ transitions and $L(A) = L(B)$.

Example

Add a new start state \tilde{q}_0 .

Consider $\hat{\delta}(E(q_0), c)$ for every $c \in \Sigma$.

Add an edge from \tilde{q}_0 to $q \in Q$ with label c if

$$q \in E\left(\hat{\delta}(E(q_0), c)\right).$$

Handling the ϵ moves

Lemma

For any NFA A with ϵ transitions, there is another NFA, say B , such that B has no ϵ transitions and $L(A) = L(B)$.

Example

Handling the ϵ moves

Lemma

For any NFA A with ϵ transitions, there is another NFA, say B , such that B has no ϵ transitions and $L(A) = L(B)$.

Proof.

Let $A = (Q, \Sigma, \delta, q_0, F)$ be given. We construct $B = (Q', \Sigma', \delta', q_0, F')$ as follows:

Construction

$Q' = Q \cup \{\tilde{q}_0\}$, $q'_0 = \tilde{q}_0$, Σ' same as Σ but no ϵ ,

$$F' = \begin{cases} F \cup \{\tilde{q}_0\} & \text{if } E(\{q_0\}) \cap F \neq \emptyset \\ F & \text{otherwise} \end{cases}$$

$$\delta'(q, a) = \begin{cases} E(\delta(E(q_0), a)) & \text{if } q = \tilde{q}_0 \\ E(\delta(q, a)) & \text{otherwise} \end{cases}$$
